DIGITAL LITERACY PROJECT REPORT

Name: Divyanshi Mohanty

Reg Number: 25BCE10828

Course name: Digital Literacy

Slot: F-22

Course code: CSE0001

Faculty name: Dr. Kannan

Date: 27/3/26

Semester: Winter Semester 2025-2026

Task 1: Create a Digital Literacy Awareness Infographic

For my project, I used Canva to design a digital infographic about digital literacy awareness. I chose Canva because it’s easy to use and has lots of templates and graphics that helped me to create a professional-looking layout. The tool helped me to experiment with colors, fonts, and illustrations to match the theme of technology and online safety.

My infographic presents important information about digital literacy in a clear and engaging way. It includes sections such as “What is Digital Literacy?”, “Useful Digital Tools for Students,” “Safe Internet Practices,” and “Professional Online Presence.” Each section is supported by simple visuals and icons, making the content easier to understand. I used a blue color scheme and consistent design style to give the infographic a clean and cohesive look, while the layout guides the reader smoothly from top to bottom. One thing I found challenging was organizing the information without making the design look overcrowded. It was interesting to learn how to simplify ideas and use visuals instead of too much text. This project helped me improve both my design skills and my understanding of digital literacy.

Task 2: Build Your Student Digital Portfolio

For this task, I created accounts on GitHub, LinkedIn, and Kaggle. Each platform serves a different purpose in building a professional digital presence. GitHub is mainly used for sharing and managing code, allowing developers to showcase their projects and collaborate with others. LinkedIn is a professional networking platform where I can present my education, skills, and achievements, and connect with professionals in my field. Kaggle is a platform used for data science and machine learning, where users can work on datasets, participate in competitions, and improve their analytical skills.

Over the next four years, I plan to actively use these platforms to grow both my skills and professional profile. On GitHub, I will upload my projects and track my progress as I learn new programming concepts. On LinkedIn, I will keep my profile updated, connect with peers and professionals, and look for internship opportunities. On Kaggle I will explore the field of Data Sciences and Machine Learning and participate in competitions. Overall, these platforms will help me build a strong and credible digital presence.

Task 3: Explore Coding & Collaboration Platforms

Platforms like HackerRank help me practice coding regularly and improve my problem-solving skills, which are important for exams and projects. Google Forms and Sheets are helpful for group work, collecting data, and organizing information efficiently. Overall, these tools will support both my learning and collaboration throughout my studies.

Part A – Coding Practice:

For this task, I used HackerRank for coding practice and Google Forms for collaboration. On HackerRank, I created an account and completed a beginner-level challenge on SolveMeFirst, it

was a python code of operation on integers , It was a good way to practice writing code and improving my confidence with programming.

Part B – Google Workspace Collaboration:

For the collaboration part, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions. The form included both multiple-choice and short-answer questions to test basic knowledge of digital literacy. I also viewed the responses in Google Sheets, which made it easy to organize and analyze the answers.

Task 4: Draft a Professional Email & Etiquette Guide

Part A – Write two professional emails:

One example of poor digital communication is when a student sends an email to a professor without a proper subject line, greeting, or clear message. This can create confusion and may even result in the email being ignored or misunderstood. For instance, sending a message like “Send me notes” without context can appear rude and unprofessional. This situation could have been handled better by following basic email etiquette, such as using a clear subject line, polite language, and a structured message. Including details like the course name and reason for the request would make communication more effective. Proper digital communication is important because it reflects professionalism and ensures that messages are understood correctly.

Part B – Create a Social Media Do's and Don'ts checklist:

As part of this task, I created a social media Do’s and Don’ts checklist to promote responsible online behavior among students. The checklist highlights simple but important practices such as maintaining a professional profile, thinking before posting, and respecting others’ opinions. It also includes key precautions like avoiding offensive content, not sharing personal information publicly, and being mindful of one’s digital footprint. Creating this checklist helped me understand how everyday online actions can impact a person’s reputation and safety.

Task 5: Cybercrime Awareness Case Study & Prevention Guide

Part A – Case Study:

For this case study, I chose cyberbullying, a form of cybercrime where individuals are harassed, threatened, or humiliated through digital platforms such as social media, messaging apps, or online forums. Unlike traditional bullying, cyberbullying can happen anytime and reach a wider audience, making it more harmful.

A typical scenario begins when someone posts or shares hurtful comments, rumors, or embarrassing content about a person online. This may start as a joke but can quickly turn serious as others join in by liking, sharing, or adding more negative comments. In some cases, fake accounts are created to target the victim anonymously, making it harder to identify the bully. Over time, the victim may feel constantly attacked and unable to escape the situation.

Cyberbullying mainly targets teenagers and college students, as they are highly active on social media and more vulnerable to peer pressure. The consequences can be severe, including emotional stress, anxiety, loss of confidence, and even withdrawal from social or academic activities. This case study shows how important it is to use digital platforms responsibly. Spreading kindness, reporting harmful behavior, and supporting victims can help create a safer online environment for everyone.

Part B – Prevention Checklist:

While researching online safety and cybercrime, I was most surprised by how easily people can become victims of scams or cyberbullying without realizing it. Many threats do not involve advanced hacking but instead rely on simple tricks, such as fake messages, links, or misuse of personal information. It was interesting to see how common these incidents are, especially among students who use digital platforms regularly.

This made me reflect on my own online habits. One change I will make is being more careful about what I share online and who I interact with. I will also make sure to verify links and messages before clicking on them and avoid sharing sensitive information like OTPs or passwords. Overall, this task helped me understand that staying safe online requires awareness, caution, and responsible digital behavior.
